

Pre-Installation Requirements for Coffee Equipment

Benchtop

18mm thick wooden bench recommended, with 70 mm wide hole to be cut under the machine for cables and water pipes to run through. Please note our technician is unable to cut through stone, concrete or stainless steel benchtops.

Power Requirements

2 Group Espresso Machine

HPM type 20 Amp Single Phase within 1 metre of machine.

3 Group Espresso Machine

HPM type 25 Amp Single Phase within 1 metre of machine.

Coffee Grinder

Standard Wall socket within 1 metre.

Please have your electrician install **HPM type** sockets only. The power supplies should be mounted high up and to one side, under the counter. Ensure the supply is easily accessible.

Water Supply

Dedicated cold water feed to **1/2 inch BSP male** outlet with isolating valve.

Incoming water pressure to the machine should be between 3 and 5 bar.

Allow space under the bench for a vertically mounted water filter 600 mm high x 200 mm deep x 200 mm wide. Our technician will supply and install the water filter.

Drain

Your espresso machine will be supplied with a 1.5 m long drain hose. This can either:

- drain into a free standing container, or:
- be connected to your building's drain system via a 40mm drain pipe and with trap.

Incorrect fittings could delay your installation so if you have any questions please call us on 09 445 1816.
